EDUCATION

North Carolina State University, Raleigh, NC
- Bachelor's in Computer Science - *May 2025*
- Concentration: Game Development

TECHNICAL SKILLS

Programming Languages: C++, C, Java, Verse
Game Engines: Unreal Engine 5, Godot 4, UEFN
Web Technologies: REST, MySQL, AngularJS, HTML, CSS, OpenGL, GLSL
Tools: GitHub, Jenkins

PROJECTS

WittleWizards | *Unreal Engine 5, C++, Blueprint, GAS, GitHub* **November 2025 - Current**
- Utilized Unreal Engine's Gameplay Ability System to create player abilities that could interact, cancel, or effect one another, assist with network replication, and apply VFX to player actions
- Implemented a single gamemode that instantiates the game and player state based on whether the game is local split-screen or online multiplayer
- Developed classes and blueprints with reduced memory space usage by utilizing interfaces, event dispatchers, and delegates

Ardenfell | *Unreal Engine 5, C++, Blueprint, GAS, GitHub* **January 2025 - May 2025**
- Implemented multiplayer to mimic a souls-like summoning system
- Replicated player actions, events, and animations across the network
- Utilized Unreal Engine's Gameplay Ability System to assist with network replication, player actions, and camera control

Educational Game Creation Tool | *Godot 4, GitHub* **August 2024 - December 2024**
- Implemented a Godot plugin to simplify the engine editor to allow only the tools for creating a visual novel style game that teachers and non-game developers could use without needing lots of game development or engine experience
- Created a page for adding images to either be used as backgrounds or to be displayed at specific points in the game
- Connected the tool to the export functionality to allow for the games to be played

Game Engine | *C++, SFML, 0MQ, V8* **August 2023 - December 2023**
- Implemented a multithreaded structure for a server to listen for client connections
- Developed an event system to handle many actions attempting to execute at once
- Created a timeline class to assist with giving certain events priority based on time and to address framerate dependent movement

RELEVANT COURSEWORK

- Game Engines
- Independent Study
- Game AI
- Linear Algebra
- Game Design
- Data Structures & Algorithms
- C and Software Tools
- Software Engineering

EXTRACURRICULAR

Video Game Development Club - *Member*
- Hosted a UEFN and Verse workshop for teaching the fundamentals of the tool and language
- Collaborated with other members to participate in club run game jams

WORK HISTORY

NCSU - *Computer Science Teaching Assistant* **September 2024 - May 2025**
- Classes: Game Engine Foundations & Foundations of Interactive Game Design
- Instructor: Dr. Alexander Card
